# TOP 5 CITIZEN Eco-Drive

## 5. General Reference for Charging Times

The time required for charging varies according to the model of the watch (color of the dial, etc.). The following times are shown below to serve only as a reference.

\* Charging time refers to the amount of time the watch is continuously exposed to light.

Illuminance (lux)	Environment	Charging time		
		Approx. charging time for 1 day of operation	Approx. charging time from the stopped state until 1-second interval movement	Approx. charging time from the stopped state until fully charged
500	Inside an ordinary office	3 hours	25 hours	-----
1,000	60-70 cm (24-28 in) under a fluorescent lamp (30 W)	1.5 hours	12 hours	-----
3,000	20 cm (8 in) under a fluorescent lamp (30 W)	30 minutes	4.5 hours	80 hours
10,000	Outdoors, cloudy weather	9 minutes	2 hours	25 hours
100,000	Outdoors, summer, under direct sunlight	3 minutes	45 minutes	11 hours

Full charging time: Time required for charging the watch from the stopped state to fully charged.

Charging time for 1 day of operation: Time required for charging the watch to run for 1 day at 1-second interval movement.

How long do citizen eco drive watches take to charge. Does citizen eco drive watch have battery. How long to charge citizen eco drive watch. Do citizen eco drive watches need new batteries. How long does it take to charge my citizen eco drive. How long does it take to charge a citizen eco drive watch. How to charge a dead citizen eco drive watch. How long should a citizen eco drive watch last.

Citizen's Eco Drive watch line is the most advanced line of sundials on the market. One of the great things about them is their low maintenance and environmental friendliness and according to citizens, they will last a lifetime. Even if you consider a dive of an echo clock drive watch another consideration is that you will not have to have the watch sent when you need the battery replaced and the case repaired properly something required by regular battery diving watches. The History and Development of Citizen Eco Drive Watch the line of watches of the Citizen Eco Drive happened as the result of the Citizen who is one of the few companies to really dedicate a lot of time and resources in the development of sundials. The Citizen Eco Drive Watch was introduced to the market in 1995. Before their introduction, the market consisted of sundials that were similar in design and technology to the first sundials using visible solar panels. With the introduction of Citizen's Eco Drive Look at the people's opinions of what sundials had changed. A diving watch with eco citizen drive, the promaster explained the Eco Drive. According to Citizen, the power generation and storage system used in the Citizen Eco Drive Watch is the most technically advanced on the market. They use a quartz movement which is powered by the combination of solar conversion and an energy cell (rechargeable lithium battery) any light source can be used which means that there is a powerless supply devoid of energy. Solar Panel A micron disc of thin amorphous silicon is used under the dial to convert light into electricity through the photovoltaic process. This energy is then stored in the special energy cell and used to power the quartz movement. Energy storage Since the primary power comes from light sources, the energy cell is often referred to by the citizen as "secondary battery" which can be misleading. The special composition of lithium ions in titanium It makes it unchanged by the usual charging cycle that hits the typical rechargeable batteries and the tests shown even after 20 years of batteries have maintained the power capacity of the 80% promoting their eco-compatible credentials. These special batteries contain none of the chemicals found in the typical batteries of the watch. A typical quartz watch will use a battery of silver oxide that is used up to exhaustion and then discarded. Citizens say the battery used in their Eco Drive watches will give a life of use. Low load mode as low power indicator The citizen's ecological clock has a charging warning mode "when this happens the second hand starts moving in two second increments instead of one, while still maintaining the correct time. If the clock has more advanced functions as a chronograph, this function may be temporarily disabled. If the citizen Eco Drive Watch is put away where no light is available, m enters a fully charged state, depending on the model, will work from 45 days to five years. Most models are also equipped with an 180-day cargo reserve. Hybernation Mode If a citizen Eco Drive Watch is kept in the dark for a prolonged period it has a hibernation mode to save energy. The second hand moves to the position of the clock from 12O, but the inner mechanism of the quartz keeps track of time. If exposed to light again the hands move on the correct time and the normal time adjustment is resumed. The charging through the normal daily use an Eco Drive Watch citizen will remain fully charged, however it should be able to dust and require the additional charging citizen recommends to use the outdoor light. The approximate loading times according to citizens are for a cloudy: 9 hours; Sunny: 3.5. After the clock has been fully charged by a low power state, it will have to be set to "all Reset modes" or will not work properly, this is obtained in different ways depending on the model, refer to the manual. Precautions. It is importantTo subject the clock to temperatures above 140 degrees Fahrenheit, this could be a problem if, for example, you load the clock leaving it on the dashboard of a car or placed too close to a regular light bulb (closer to 20th) or used a Halogen lamp. Exposure to strong magnetic fields can cause the clock to start displaying the wrong time. This means keeping the clock away from large TVs, microwave ovens, computer monitors, loudspeakers for mobile phones. anything with a magnet in as trays of magnetic coins and so on. Adjusting the clock to sudden changes in water temperature can compromise the sealing capacities that allow the water to enter the clock. Heat can also cause some deformed watch elements that could lead to mechanical failure. Your best to avoid wearing your watch in hot tubs, jacuzzis and saunas. Source: Citizen Europe
