Add the game remotely Android TV also has its own large catalog of moded games. They usually enable the game using the device's remote control on which you install them, but this does not always provide the best and most convenient impressions. That is why Android TV also allows you to connect a Bluetooth controller. To do this, just enter the "Settings" option and select "Add the device" option. On devices like Mi Box you will find the pilot's submenu and its accessories. You can also use the controller to move around the menu and play games. Remember that PS4 and the latest version of the Xbox One controller can also work via Bluetooth. 3. You can also use a keyboard or mouse.
According to the same three principle, you can also synchronize the Bluetooth keyboard and mouse.
To do this, you also need to access the Settings menu and select the device synchronization. Remember that the mouse and keyboard must have a Bluetooth connection and be in the synchronization mode to make the process work. This can help you write better, for example when you want to search or browse the internet on Android TV. 4. It works even when browsing the network although Android TV allows you to use several browsers, many of them may not work properly or they cannot be easily operated without a keyboard and mouse.
As you have just seen, you can connect them via Bluetooth, but if you don't have this option, you can use other alternatives. One of them is TVweb Browser, a browser optimized for better operation on TVs and easier to use. Its disadvantage is that the interface is quite ugly and bad, but it works without a keyboard or mouse. YesOther alternatives I invite you to tell us in the comments. 5. Use a cell phone as a pilot.
If you are one of those people who never know where you left the remote control, there is a program that can turn your smartphone into a remote control to an Android TV. The gadget is called Android TV remote control and it is enough for both devices to be connected to the same Wi-Fi. Once you launch the program, enter the screen where you include the name of the Android TV compatible device in the mobile phone operating section. When you click on the device name, the program will ask for a code that will be displayed on the TV screen to which the device is connected. Enter it and all this will sync the mobile and now show the remote control interface. 6. Send pictures and files to any device. One of the hardest things on this device is moving a local file to a computer. The easiest way is to use a file browser to send these photos and files to USB and from there to a computer. Sometimes these programs break or cannot copy several files at the same time, which just happened to us with certain intervals. Article. The solution is the cloud. If you install the EU File Explorer program, you will find a Cloud compartment in the left column, where you can configure your Google Drive, Microsoft OneDrive or Dropbox account. microbiologia y parasitologia pdf libro Since the EU file explorer has recently deteriorated, there are other alternatives like Mixplorer and even the Xiaomi file manager that may also interest you. 7.
Install programs differently than regular mobile version of Android. The TV version also allows you to install programs from external sources such as USB memory and even download the program.from the internet. datong coal mine group annual report 2017 To do this, it is enough to activate the ability to install from unknown sources, which are usually in the security and restrictive section. gloud games lite apk To do this, find the desired APK file and download it or insert it on a USB drive. Then, using a file browser like I File Explorer, browse and run the APK with the application you want to install. It should be noted that if it is not an application customized on Android TV, it is unlikely to work properly. 8. You voice control, most Android TV has a reserved microphone button in the remote control. It opens up a huge range of options, such as the ability to look directly with the content using the voice, open the application or make changes to the settings. lesson plan using grammar translation method But that's not the best or all you can do. 9.
Don't forget Google's assistant, and the best thing is that since December 2018, Google's assistant has started to get to Android TV, so all you can do with your device is multiplied. And if your TV pilot has no microphone, you can also install the Android TV remote control application to which we focused on.
When it comes to what you can do with Android TV assistant, you can control everything from volume to play. You can also use it to open and control films on YouTube, Movies and Series Netflix or Spotify music, not to mention all the other activities that the Assistant allows. 10. Locking offensive words If you want to prevent the device from using the device to search for offensive words using voice function, you can activate special protection for this purpose.
To do this, you need to enter your device settings and look for voice settings where you can activate the ability to block offensive words. In the same configurationYou can activate the BOVE secure filter to prevent the use of the voice assistant sections where you will find content that is not suitable for everyone. 11. Access to Restrict Profile Android TV is a system called limited profile. You can activate it in safety parameters and limits, and at the same time you will need to write a pin. Once you have set the pin, you will have a list of installed applications and you will be able to choose how much access you have for the limited profile rather than.
It serves as a kind of parental control. If the user wants to see more installed programs when you set it, you will need to enter the PIN setting. They also can't download or buy more applications without this PIN. 12. Lock Google Play Pucks by configuring Google Play You can also configure the sequence of action by ordering which you can always buy with or every 30 minutes when you ask Google Play password. At the same time, it prevents accidental and unwanted purchases on your profile. 13. snack masti app When shooting SE Secre, you can also pick up the screen with Android TV, and it's simply as in the world. MA © can vary depending on the unit, but usually two buttons need to be combined at the same time, such as boton lighting and reducing the amount of remote control. You will see the animation fixation and will be stored on the route/SDCARD/images/screenshots/. 14. Expand the internal memory of each Android TV device may have a certain amount of internal memory, which can sometimes be too limited. In such cases, you can expand it by connecting USB and setting it as internal memory in the device settings for storage and recovery options. HereClick on the use and format as a storage device at a USB and settings. zesufajuge.pdf
USB memory is formatted and possible from this moment for use as a second hard disk on the device. Here is a more accurate explanation if you need it. 15. Move the games and applications to a USB device if you are connected to Android on TV via a USB device, you can also broadcast games or applications there in many models, regardless of whether you were configured as an internal memory or not a field for Click this on the game in the application menu so that the menu with data and options, for example, B. Opening, is displayed. Touch the options used here. gofap.pdf If you do this, I will show you which storage unit you installed a game that is usually your internal memory.
If you have a USB connection, it will also be displayed. Then click on the USB hard drive to start the file transfer process. Of course, look at an affordable memory, because when it is more, there is a message that there is no place for the game. 16. Disconnect automatic applications updates, but if you cannot use USB to increase the Android TV capacity, you also have other options when it comes to checking the available space to avoid avoiding the device or television. For example, deactivate automatic updates for all your applications and leave only some applications. To do this, you must enter the Google Play Store application and go to the settings. They display the option regarding the automatic update of the application in which you can deactivate you in accordance with your preferences. 17. Showing a more contained on the remaining screen when Android TV is included in REST mode, only a black screen or background shows.However, you can also display useful information such as visualization information, date or weather. But that's not all because there are third -party applications that help show you more information. laxoxuwoxameb.pdf Although this is not compatible with all Android televisions, there are applications like Lucid Daydream which display information such as calendar events or notifications. Another interesting (and it works on my half box) is the photo gallery and the screen saver with which you can use different sources like Google Photos to put galleries like background images. 18. Transfering the audio from the TV to the mobile phone is an interesting little tip that might interest you. Imagine that you are looking at something at night and that you don't want to disturb your family or roommate. latest updated periodic table pdf Well, there is an option to bring the Android TV audio to your mobile if the image is always on television. It is one of the different localcast options that works on several devices and can transport audio from one click from one to the other. Just go to the screen game and click on the sound of your phone.
When we talk about third -party applications, do not forget plex. You can do a lot of things with it, but on Android TV, you will certainly have more options that define your own Netflix content on your computer or own Spotify. With a native Android TV application, it is much easier to consume the content you have synchronized from your computer. 20.
Play with developers and in the mobile version of Android TV, you can also activate hidden development options.
To do this, just enterAbout the device in the settings and click the build number seven times with the middle button. When you do this, a new menu will appear with Creator parameters. You will see some parameters like animation scale changes to make the system look smoother and much more. Of course, since these are very advanced parameters, I advise you not to touch too much if you do not know what you are doing, because it can affect the performance and operation of Android profile. 21. Quit applications properly. If you have any apps that are giving you problems, Android TV lets you force close them without waiting for them to load. To do this, go to the settings and once inside, go to the "Devices" section. Now click on the program in the "Installed programs" category that is running with failure. If you click on the program here, it will not open directly, and a menu with parameters will appear first. Click "force stop" to stop. You will also have the option to uninstall programs and remove them directly from the drive if the problem persists. 22. Install (or remove) Android TV Recommendations and allow some apps to show recommended content from your TV, YouTube, Hulu, Google Play, Netflix, and more.
You may like it or not, but whatever it is, you can always change it in the settings, the recommendation parameters, which will be on the main screen. In these options, you can individually activate the recommendations of different applications that are coordinated with them. 49006260205.pdf
This means you can have them all on, just some, or completely off to keep your home screen as clean as possible. Depends on you.How to reset Farabrica data and detailed Android TV data also allows you to reset your device to leave it as if you just buy it as you can during your marriage. To do this, you will need to move on to the device settings and find the option to restore your favorite data that may be in the unit section.
Here you can continue and clean all your programs and changes. To make
